DETAILED ACTION

Claim Objections

1. Claim 5 is objected to because of the following informalities: limitation in parenthesis should be deleted. Appropriate correction is required.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2642

3. Claims 1-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-33 of U.S. Patent No. 6,049,602. Although the conflicting claims are not identical, they are not patentably distinct from each other because both instant application and patent '602 claim a method for providing communication control functionality at a remotely located site using a data network. In general, group of claims 1-18 of instant application substantially correspond to group of claims 1-15 of patent '602; group of claims 19-22 of instant application substantially correspond to group of claims 16-33 of patent '602. The common subject matter claimed above includes: receiving log in information at a server, verifying the log in information; obtaining the address of the originating terminal; and establishing a communication. Deleting the step of receiving telephone log-in information of patent '602 to make the claimed invention of instant applicant would have been obvious to one of ordinary skill in the art at the time the invention was made.
